

SUPER SOLO

WHY THE SUPER SOLO?

- Bay width of 10m wide and lengths of 15 to 50m
- Tunnel height: 4m at the apex for full tractor access.
- Trellis: Steel trellis systems can be added for growers wanting to trellis crops hanging from the tunnel itself.
- Venting system: The Super Solo Series can be fully vented using specially designed venting clips.
- Doors: Options for roller doors using 200-micron poly for an excellent seal with full tractor access. Simple Shade-Net doors are also available.
- Continuous roping system: This system cuts the time to rope tunnels by 50%.
- The system uses a continuous rope that can be retightened easily mid-season.
- Comes complete with the Haygrove rope clamp system which enables the grower to keep ropes very tight at all times.
- Internal steel structure for trellis crops: Modular steel frames designed for growers wanting to trellis crops hanging from the tunnel itself are optional.

HAYGROVE HSO HOOPS

We make use of high tensile galvanized steel to add that extra strength to your tunnel where needed.

- Haygrove special oval hoops bend like traditional circular steel but have increased lateral strength due to its flat sides. The Haygrove profile steel provides a stronger and lighter hoop and therefore more cost effective solution.

HAYGROVES SCALABLE RETROFIT OPTIONS

DOORS

- The Trellis tunnel can be fitted with many different doors and materials, the doors vary from automated through to manual a few options are
 - Roller doors
 - Hinged Doors
 - Exclusion doors
 - Simple shade net doors

SIDE SKIRTS

- Multiple material options for side skirts which can be used as basic protection from elements or fully sealed insect protection.
